

## Code and CI/CD, powered by the Atlassian platform

Elevate your software delivery from planning to production and beyond, with built-in AI, CI/CD, and a best-in-class Jira integration.

[Try it now](#)

The screenshot shows the Bitbucket homepage. At the top, there are navigation links: Bitbucket, Your work, Repositories, Projects, More, Create, Search, Help, Settings, and Profile. Below the navigation, there are two sections: "Pull requests to review" and "Your pull requests". The "Pull requests to review" section lists three pull requests:

Reviewers	Builds
7	✓
34	✓
4	✓

The "Your pull requests" section lists one pull request:

Reviewers	Builds
4	✓

Below these sections is a "Jira issues" section:

Issues	Status	Assignee
MAC-14 CLONE - June Daly	IN REVIEW	...
IOS-8 Afterburner revision II script	IN PROGRESS	...
MB-7 Tips and Tricks Blog Series 2 of 3	TO DO	...
IOS-15 Customers reporting shopping cart purchasing issues	TO DO	...
PM-6 Afterburner revision III automation	TO DO	...

### Simplify your toolchain

Put your code & CI/CD on one platform with capabilities spanning the entire software development lifecycle.

### Accelerate velocity

Eliminate tedious tasks with AI and automation. Reduce distractions and context switching by centralizing developer workflows on one platform.

### Boost collaboration

Easily share updates about code and CI/CD across software, ITOps, and business teams via Jira, Confluence, and the Atlassian platform.

See code & CI/CD workflows on the Atlassian platform in action

## Security and compliance, at scale

A screenshot of a pull request review interface. On the left, a sidebar lists navigation options: Commits, Branches, Pull requests, Pipelines, Deployments, Jira issues, Security, and Downloads. The main area shows a diff view for a file named ProductPage.js. The diff highlights changes made between lines 19 and 40. On the right, a summary bar indicates "6 of 10 checks passed" with an orange warning icon. Below this, a section titled "These will run on merge:" lists two rules: "No merge after 5pm" and "No merge on weekends", each with a clock icon. At the bottom, a summary states "3 of 3 builds passed" with a green checkmark icon.

## Org-wide quality control for your code

Enforce internal code quality policies and compliance requirements with standard or custom merge checks that are unique to your organization.

A screenshot of a Snyk security analysis interface for a project named "goof". The sidebar on the left includes links for Source, Commits, Branches, Pull requests, Pipelines, Deployments, and Snyk, with Snyk being the active tab. The main content area shows a summary: "Snyk found 66 vulnerabilities in this project". It provides a link to "Security insights for goof/package.json". Below this, a specific vulnerability is detailed: "HIGH adm-zip - Arbitrary File Write via Archive Extraction (Zip Slip)". The details include: VULNERABILITY | CWE-29 | CVE-2018-1002204 | CVSS 9.4 | NPM:ADM-ZIP:20180415 | SCORE 899 ?". It lists "Vulnerable versions" as adm-zip@0.4.7 and "Fixed in" as adm-zip@0.4.11. The "Exploit maturity" is marked as "MATURE". A "Overview" section notes that adm-zip is a JavaScript implementation for zip data compression for NodeJS and that affected versions are vulnerable to Arbitrary File Write via Archive Extraction (Zip Slip).

## Build security into your entire workflow

Continuously monitor and fix security vulnerabilities during development, code review or as part of your CI/CD pipeline with native security capabilities or partners like Snyk, Synopsys, Sonar and others.

The screenshot shows the Bitbucket Pipelines interface. On the left, there's a sidebar with various project links like Source, Commits, Branches, Pull requests, Pipelines, Deployments, Jira issues, Security, and Downloads. The 'Pull requests' link is currently selected. In the main area, a pipeline run is displayed with the ID #334. It shows a green 'Rerun' button. Below it, a note says 'This pipeline is generated dynamically by your company. View here.' followed by a link to 'Initial Bitbucket Pipelines configuration'. The pipeline itself has several steps: 'Setup and install JS deps' (9m 38s), 'Linking' (5m 44s), 'Prettier check' (3m 49s), 'Check for duplicate dependencies' (41s), and 'Type check'. All steps are marked as successful with green checkmarks. To the right, the 'Build' tab is active, showing the command 'npm run test' and its output. The output includes npm version information, lifecycle events, and Jest test results. One test failed with the message 'Expected value to be (using ===): 5.75 Received: 4.25'.

## Platform-level CI/CD orchestration

Set and enforce CI/CD workflows at a platform level to ensure teams adhere to best practices and are compliant.

The screenshot shows the Atlassian Admin interface under the 'Products' tab. On the left, there's a sidebar with 'Products', 'User access settings', 'Product URLs', 'RELEASE MANAGEMENT', 'Product updates', 'Release tracks', and 'Sandbox'. The main area shows a list of products. For the 'Bitbucket' product, it shows 'cmtmg-20240503' and '30' licensed users. Below this, there's a table of user groups:

Group	Members	Default group	Product roles
Android devs No description	16	User	...
Designers No description	3	User	...
Dev managers No description	5	User access admin	...
Developers No description	5	User	...
Platform devs No description	9	User access admin	...
Tech leads No description	10	User access admin	...
bitbucket-admins-cmtmg-20240503 Grants access to Bitbucket administration features on cmtmg-20240503	2	Product admin	...
bitbucket-users-cmtmg-20240503 Grants access to Bitbucket on cmtmg-20240503	1	User	...
iOS devs No description	4	User	...
stash-users No description	23	User	...

## Granular access and usage permissions

Control permissions at the workspace, project, or repo level or define specific branch level or environment level permissions.

## AI that goes beyond code generation

Atlassian infuses AI throughout the entire software lifecycle to improve developer experience and increase velocity.

The screenshot shows the Bitbucket interface for creating a pull request. On the left, there's a sidebar with navigation links: Source, Commits, Branches, Pull requests (which is selected), Pipelines, Deployments, Jira issues, Security, and Downloads. The main area is titled "Create a pull request". It shows the "Source branch" as "STK-122-personalization-input" and the "Destination branch" as "main". The "Title" field contains "STK-122 Update color picker component". Below it, the "Description" field has a rich text editor toolbar. The "Reviewers" field lists three users: Christine Sanchez, Isaac Varghese, and Austin Lambert. There's also a checkbox for "Delete branch" and a "Create pull request" button. At the bottom, a table shows "5 commits" with columns for Author, Commit, Message, Date, and Builds. Two commits are listed by author Jenna Nangong.

Author	Commit	Message	Date	Builds
Jenna Nangong	a5f7e9c	Write unit tests for color picker component	2024-04-29	✓
Jenna Nangong	b2d8c1f	Implement color validation in color picker component	2024-04-29	✓

### AI-generated PR descriptions

Automatically generate pull request summaries based on code changes and commit messages.

### Generative AI editing

Help developers write comments and PR summaries to enhance writing clarity.
